Primary funding for the RERC was provided by the National Institute on Disability and Rehabilitation Research, US Department of Education, Washington, DC (#H133E30005). Opinions expressed in this report are those of the authors and should not be construed to represent opinions or policies of NIDRR.

Additional student training support has been provided by NIDRR training grant to Dr. Rory Cooper (H133P30002) and the RSA grant to Dr. Charles Robinson (H129E50008).

The University of Pittsburgh Medical Center has been most supportive in terms of providing start-up faculty positions, office facilities and logistical support. Without this contribution, the notion of competing for the Rehabilitation Engineering Research Center on Wheelchair Technology (RERC) could not have materialized.

The task on manual wheelchair design (MM-1) was supported by a two year grant from the Spinal Cord Injury Research Foundation of the Paralyzed Veterans of America (PVA).

We owe an ever increasing debt of gratitude to our community of collaborators. We extend our sincere appreciation to clinicians, consumers, rehabilitation technology suppliers, manufacturers, facility administrators and others who have volunteered their time and expertise in the interests of improved wheelchair technology.

Finally, we wish to thank the members of our Advisory Board who have taken time from their busy schedules to first learn about our plans and proposed activities, and then to provide feedback and suggestions for improvement over the five years of the Center’s activities.

This final report was prepared under the direction of Douglas Hobson, Co-Director of the RERC and its most significant editorial support from Jean Webb, Administrative Assistant and Ashli Molinero, Communications Specialist. The final report is also available for full color viewing and downloading from the RERC’s website: www.rerc.upmc.edu.

NIDRR Mandate ........................................................................................................................................................................1
Executive Overview ..................................................................................................................................................................1
Summary of Tasks .....................................................................................................................................................................2

I. Wheelchair Technology Tasks .............................................................................................................................................4
   Task PM-1: Improved Electric and Electromechanical Systems ..................................................................................5
      PM-1a: Computer Simulation of Electromechanical Systems ..............................................................................5
      PM1b: Power Wheelchair Batteries .....................................................................................................................7
      PM1c: Power Wheelchair Controllers .....................................................................................................................8
      PM1d: Improved Wheelchair Motor Drives ...........................................................................................................9
   Task PM-2: Advanced Mechanisms ...............................................................................................................................11
   Task PM-3: Input Devices and Control Concepts ........................................................................................................14
   Task PM-5: The Use of Integrated Controls ................................................................................................................16
   Task PM- 6: New Concepts In Powered Indoor Mobility ...........................................................................................18
   Task PM-7: Powered Mobility Simulator ......................................................................................................................26
   Task MM-1: Structural Improvements to Manual Wheelchairs .............................................................................28
   Task WP-1: Consumer-Responsive Mobility Prescription Process ...........................................................................34
   Task WP-2: Wheelchair Prescription Software Project (WPSP) .................................................................................36
   Task STD-1: Participation in the Development of Wheelchair Standards .................................................................38

II. Improved Wheelchair Seating...........................................................................................................................................40
   Task S-1: Cushion design for pressure ulcer prevention ............................................................................................41
   Task S-2: Distortion measurement and biomechanical analysis of in vivo load bearing soft tissues ..................44
   Task S-3: Non-invasive Monitoring of Spinal/Pelvic Alignment..............................................................................51
   Task S-4: The Effects of Positioning on Individuals with C5-C7 Quadriplegia.......................................................54
   Task S-5: Customized Wheelchair Seating for Populations with Changing Needs ................................................56

III. Improved Wheelchair Transportation ............................................................................................................................58
   Task T-1: Criteria for Standards and Design of Wheeled Mobility Devices for use in Transportation Vehicles 59
   Task T-2: Development of Wheelchair Securement Interface Concepts .................................................................62
   Task T-3: Development of Docking Type Securement Devices .................................................................................68
   Task T-4: Research and Coordination Related to Standards Development for Wheelchair Transportation ......76

IV. Training and Demonstration Activities ..........................................................................................................................78

V. Dissemination and Utilization ..........................................................................................................................................82

VI. People ..................................................................................................................................................................................91
